

What is an Enviro Vault?

Concept

The Enviro Vault is the patented concept whereby a recessed chamber is installed “INSIDE” the tank with an access door through the tank wall. All valves, sample taps, electronic controls, and heater (if required) are mounted “INSIDE” the Enviro Vault.

Enviro Vaults can be fitted in any size or shape of new tank or in-service tank for any specific application – Heavy Oil, Production Tanks, Produced Water, Rental Tanks, Instrumentation Packages, Separator Packages and any other application where a tank is required.

Enviro Vault does not build tanks; we can work with your manufacturer of choice, across North America, to provide Enviro Vaults for new or used tanks.

Mission

Our mission is to be the standard in tank design. We work with all industry stakeholders to promote the Enviro Vault advantage in operational savings, safety, security and superior environmental stewardship.

New Technologies under Development

To be featured in upcoming Enviro Vault News editions

– The next generation “double wall tank” design offering complete internal containment of valves, piping, HLSD, instrumentation, etc.

– A tank design utilizing catalytic heaters as a replacement for fire tube heaters in tanks that require temperature maintenance.

– A tank w/ built in separator design that reduces overall environmental footprint and reduces the heater requirements for tank contents/equipment.

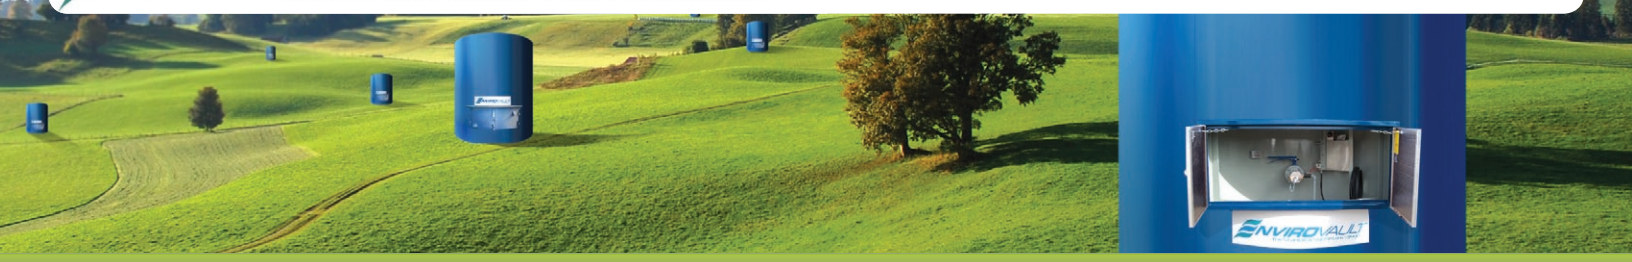

Features

- 1 Superior spill containment
- 2 Prevents valve damage from freezing
- 3 Easy to move and retrofit into existing equipment
- 4 Fittings can be laser cut and installed prior to shipment
- 5 Reduces tank & equipment “footprint” on the lease

Benefits

- 1 Increases operator safety and efficiency
- 2 Reduced soil contamination and reclamation costs
- 3 Reduced operation costs
- 4 Improved security
- 5 Superior environmental stewardship

Enviro Vaults for Rental Tanks

In each quarterly edition we will feature an Enviro Vault for use in a different application.

400bbl Frac Tank

Vertical 400bbl d/w tank

- 1 Heated spill containment keeps leases clean from drips
- 2 Valve protection from freezing and transportation damage
- 3 Eliminates handling of problematic catch trays
- 4 Adds only +/-10% to the overall cost of rental tank

Enviro Vault is pleased to announce:

MIKE NIELSEN

Mike assumed the General Manager position with Enviro Vault Canada Ltd on October 1, 2009. He brings with him over 15 years of oil and gas industry experience, both in the field level and in management roles, including 6 years as a Sales and Marketing Manager at one of western Canada's largest tank manufacturing companies.

Mike is a graduate of the University of Calgary Marketing Management program. Mike is responsible for overseeing day to day operations, promotion of Enviro Vault's new technologies currently under development and overall enhancement of the Enviro Vault brand.

Testimonial

"For over 3 years, Enviro Vault trailer mounted tanks have been an asset to our company. With Enviro Vault tanks, we don't have to worry about anything freezing during the winter months. Enviro Vault is not only cost-effective for our operations, but they eliminate soil contamination by preventing any leakage. Enviro Vault sets the standard high for quality and we wouldn't use anything else!"

Matt Orlandi
Distribution Manager
Sikanni Services Ltd.

TIPS FROM THE VAULT

Need Freeze Protection?

Catalytic heaters mounted inside the Enviro Vault have successfully provided freeze protection for tanks up to 2000 bbls.

Proper Heater Installation

Ensure catalytic heaters are mounted within 2" of and facing the back wall of the Enviro Vault with adequate ventilation.
