

Oil Sands

An Enviro Vault® can be utilized in oil sand operations that would normally have external valves on the side or roof of a tank. Any equipment, such as multiple sample lines c/w blowcase, can be placed in an Enviro Vault. Large Conventional Enviro Vaults like the 6Wx6W can be used in oil sand applications.

High level shut down and door assemblies are available for all types of Enviro Vaults in any application. <http://www.envirovault.com/Accessories>
